

JavaScript Object Exercises (Beginner Friendly)

Exercise 1 – My First Object

Create an object that represents your gadget. Practice object properties, methods, and updating values.

Exercise 2 – Upgrade Mobil

Add, update, and delete properties from an object to simulate upgrading a car.

Exercise 3 – Optional Chaining

Safely access object properties that may not exist using optional chaining.

Exercise 4 – Object Inspector

Use `Object.keys`, `Object.values`, and `Object.entries` to inspect object data.

Exercise 5 – Pass by Value vs Reference

Understand how primitive and non-primitive data behave differently in memory.

Exercise 6 – Clone Object

Clone objects safely using the spread operator without mutating the original.

Exercise 7 – Merge Objects

Combine multiple objects into one using the spread operator.

Exercise 8 – Destructuring Object

Extract selected properties from an object using destructuring.

Exercise 9 – Destructuring with Default Values

Handle missing object properties gracefully using default values.

Exercise 10 – Nested Destructuring

Extract deeply nested object data in a clean and readable way.

Mini Challenge – Car Comparison

Compare two objects using a method that accepts another object as parameter.
